Abstract (en)
Bridging material for a joint in a road, such as a joint at the location of an abutment and a bridge deck, which bridging material is intended to be laid with a base course on the sections enclosing the joint, and the top of which bridging material is intended for applying thereon a wearing course of asphaltic concrete, comprising a bottom layer that defines a lower surface, a top layer that defines a top surface and a series of strips of a relatively hard material arranged alongside one another, which series of strips is accommodated between the two layers and which strips are intended to be laid transversely over the joint. <IMAGE>
