Abstract (en)
[origin: EP1262602A2] The panels (1) are held on a triangular frame (3) with skids or feet resting on the ground. There are sloping beams (2) which hold the long edges of the rectangular panels. The foil (5) is folded over the top edges of the panels, and each foil covers several panels. The bottom edge of the foil extends beyond the bottom edges of the panels onto the ground, and sandbags (16) are placed in the obtuse angle between the bottom edges of the panels and the ground, to hold the foil in place.
