Abstract (en)

[origin: EP1262720A2] The bleed for a heating fluid circuit includes a bleed gas container (1) with a feed pipe (11) and a bleed (4) having a rotary suction pump (3) to aspire the fluid over suction stub (28) and with return flow into the circuit. The single feed pipe (11) of the circuit (13) extends into the bleed container from the pipe (11) which opens into the upper half of the container via an injector nozzle (2). The gas pipe (10) opens in a float (14) in the water tank (6).
