Abstract (en)  
[origin: WO0191859A1] Clamp connection for support structures, in particular for play purposes, comprising a multiplicity of inter-connectable connector joints (1) and tubes (3), which display undercut pegs (9) on the surfaces to be connected, whereby said pegs (9) are connected in form-locking manner by couplings (2). These couplings (2) consist of two hemispheric coupling halves (4) and (5) which comprise grooves (10) corresponding to pegs (9). According to the invention, the connector joints (1) may consist of two connector joint halves (11) and (12) comprising grooves (10) which correspond to the pegs (9), so that the connector joints (1) can be connected directly to each other in form-locking manner by hemispheric connector elements (6).
