Abstract (en)
[origin: US2003136236A1] Pliers contain on both pliers limbs a pliers handle, which is injection moulded round the corresponding metal pliers limbs. Injection moulding on takes place at a point located at the handle end facing the pliers joint. As a result the entire surface of the handle, which can be gripped by a user, remains free from surface disturbances and interference. A raised marking can be applied to the mould-on point.
