Abstract (en)
[origin: WO0169729A1] The invention relates to a plug-in connection between a printed-board connector (3) and a mating connector (13), said printed-board connector (3) being provided with a connector shield (6). Between the printed-board connector and the mating connector an I/O board (1) with an opening (2) is interposed via which the printed-board connector and the mating connector can be contacted and fastened to each other. Since the printed-board connector is not screwed together with the I/O board according to the most recent standard, a support element is provided which forces the I/O board (1) against the connector shield (6) of the printed-board connector (3) when the mating connector (13) is screwed together with the printed-board connector (3).
