Abstract (en)

A product-application device consists of fibers (11) provided with filler particles (30). The particles are capable of absorbing liquid having a weight greater than or equal to a weight of particles and/or solution of compound in liquid, and/or capable of dissolving in liquid. The particles lack cotton. <??>Independent claims are included for: <??>(a) a method of manufacturing an application device by co-extruding a fiber containing plastic material and particles, and placing the fiber and a liquid in contact with one another; and <??>(b) a fiber for application device, comprising synthetic material and filler particles associated with the synthetic material.
