Abstract (en)
[origin: EP1264566A2] A universal, wind-proof potholder for open-air cultivation, which comprises a base (14) from which a series of uprights (15) extend upwards, which can receive anchoring elements (13), adjustable in a radial position and acting on a wall of the pot. Said potholder comprises adjustable seats (16) for housing spacer elements (12) for adjacent pot-holders (11) and in particular the uprights (15) are in the form of radial couples, whereby each couple identifies a U-shaped seat (16) facing upwards and suitable for receiving one of the anchoring elements (13) and one of the spacer elements (12). The spacer element is generally star-shaped and the anchoring element is wedge-shaped. <IMAGE>
