Abstract (en)

[origin: EP1264920A2] The sliver drawing unit, for a spinning machine, has a fiber bundling zone (3) after the final pair of drawing rollers (1) with an upper (1.1) and lower (1.2) roller. The fiber bundling zone has a pneumatic condenser (4), with a suction shoe (8) linked to a suction source (10) to support the path of the continuous perforated belt (6) which carries the fibers. The fiber condensing zone is defined by two clamping points (K1,K2), formed by the nip between the final drawing rollers on one side. A continuous upper belt (12), to support the carried fibers on the perforated transport belt, is aligned at a wedge angle to it, tapering towards the second clamping point.
