Abstract (en)
[origin: EP1264954A1] Locking device for the wing of a window or door comprises sliding connecting rods (5) of fittings, i.e. a first fitting (20) optionally already arranged in a fitting groove and a corner deviator, which are detachably coupled to each other via a deviating part. One of the fittings has a ramp on one end. Preferred Features: The ramp is connected to the corner or guiding channel of the deviator. The guiding channel interacts with a connecting rod of the other fitting.
