Abstract (en)

[origin: EP1264957A1] Turning device comprises a winding drum (14) rotated by a winding shaft (12), an annular groove (16) on the periphery of the drum, a wedge groove (22) on the periphery of the drum for guiding a wedge-shaped annular segment, a first fixed stop in the wedge groove, a second fixed stop in the wedge groove, a first catch for slotting into the wedge groove, a second catch for slotting into the wedge groove, control plates (40, 50) rotating on the winding shaft, and a control device (80) arranged in an axial groove (17) running through the wedge groove of the drum. Preferred Features: The control device runs radially into peripheral recesses of the control plates.
