Abstract (en)

A safety device adapted to operate as a supporting base for electronic or electromechanic panels to be installed at perimetrical areas of sports or public demonstration grounds or fields comprises a coupling element, applied to the panel or forming a portion thereof, said coupling element being coupled to a bearing base through a pivot pin allowing said coupling element to rotate; as counter-biased by a resilient element, applied between the bearing base and the coupling element connecting the base to the panel. <IMAGE>
