Abstract (en)
[origin: WO0158307A1] The invention concerns a toothbrush whereof the neck (1) is provided with a centring spindle having a snap-on tab (2) at its end secured in a hole (4) of the handle (3). The handle is hollowed out over its entire length with a cylindrical orifice for housing a push element whereof the stem (10) is provided with unlocking wedges (14) to disengage the snap-on tab and the handle. The invention is applicable to toothbrushes produced in several separable parts.
