Abstract (en)  
[origin: WO0170139A2] The present invention relates to skeletal reconstruction cages and a method of providing variable fit for a skeletal reconstruction cage. The skeletal reconstruction cages include a central body having first and second ends, a first end cap coupled to one end of the central body, and a second end cap coupled to the other end of the central body. At least two of the central body, first end cap, and second end cap are formed from bone. Each of the central body, first end cap, and second end cap may be provided in different sizes so that cages with varying overall heights, and related angulations, may be created.  
[origin: WO0170139A2] The present invention relates to skeletal reconstruction cages (110) and a method of providing variable fit for a skeletal reconstruction cage (110). The skeletal reconstruction cages (110) include a central body (10) having first and second ends, a first end cap (70) coupled to one end of the central body (10), and a second end cap (70) coupled to the other end of the central body (10). At least two of the central body (10), first end cap (70), and second end cap (70) are formed from bone. Each of the central body (10), first end cap (70), and second end cap (70) may be provided in different sizes so that cages (110) with varying overall heights, and related angulations, may be created.
