Abstract (en)

[origin: WO0170171A1] A capsule filling machine in which the products to be filled inside the capsules are fed hermetically from the inside of the rotating tower and are pushed in the withdrawal area of the dosing devices by the centrifugal force. The layer of the product to be packed, in the withdrawal peripheral area, has a minimum height and it allows packing even minimum product quantities. While working, the dosing devices are always immersed in the withdrawal peripheral layer and they do not come out from it even during the discharging phase.
