Abstract (en)  
[origin: WO0162484A1] A card package production system (100) with a printer module (102) that prints and provides carriers (113) to an attachment module (104) for attaching cards (130) to matching carriers has a carrier transport mechanism (Figs. 11-14 and 48) with carrier support members (224 and 226) with upstream ends that are elevated relative to the downstream ends of downstream carrier support members (226 and 228), respectively, to enable an upstream carrier to pass over the top of a downstream carrier to prevent the upstream carrier from jamming into the downstream carrier during a temporary halt in operation.
