Abstract (en)  
[origin: WO0171115A1] The invention concerns a shelter for protection against hail consisting of a rigid frame formed with vertical posts, bearing at their upper part at least two crosspieces (4) mutually connected by at least two transverse purlins (5), whereon is arranged a roof (6) in the form of an open-worked structure designed to ensure protection of a ground space against hailstones. The invention is characterised in that the cover (6) consists of a plurality of individual elements (7) shaped, prior to their installation, into a profile adapted to make them self-supporting and arranged juxtaposed, between two successive purlins (5) where to they are secured with fixing means, linking said self-supporting elements (7), to the purlins (5) by their ends (7a).
