Abstract (en)
[origin: WO0171418A2] The objective of this invention is to provide an automatic photo-seal dispenser which will provide optically uniform conditions throughout the entire region in the photo booth. Because it has a brightness adjustment means to adjust the brightness of the camera's output image, it will enable the image which the customer sees when he is considering a pose to match the actual image that will be photographed and printed as a photo-seal. The second illumination means to illuminate the subject of the photograph of this invention has a strobe box which illuminates the region to be photographed by means of a stroboscopic illumination unit contained in a box-like enclosure, a reflector panel which reflects the strobe light emitted by the device into the region to be photographed, and a diffusion panel which diffuses the strobe light into the region to be photographed.
