Abstract (en)

[origin: WO0171912A1] The invention relates to a method for locating and setting a channel in a telecommunications terminal comprising a radio and/or a television receiver. According to said method, available channels are located and set in the radio and/or television receiver. The invention is characterized in that the channel is automatically located and set using the Internet, whereby the telecommunications terminal is connected to the Internet and the available channel is downloaded to the radio and/or the television receiver.
