Abstract (en)

A shoe having a top part or upper (2), an inlay sole (14), an outsole (4, 4A), and an aeration or transpiration system (5-16) comprising: one or more aeration passages (16) defined in said inlay sole (14); a path (7A) for passage of air, which is defined underneath said inlay sole (14) and is able to set in communication said aeration passages 16 with at least one passage way (5) that extends between said path (7A) and the outside of said outsole (4). At least one substantial part of said path (7A) is defined in the body of an insert (6) set underneath said inlay sole (14) and in contact with the latter, said insert (6) being at least partially surrounded by or enclosed in a material constituting said outsole (4, 4A). The outsole can thus be formed by means of injection moulding directly on the ensemble made up of said upper (2), said inlay sole (4) and said insert (6). <IMAGE>
