Abstract (en)
[origin: EP1267022A2] The at least one locking lever (3), especially a central locking lever or a fastening lever cooperating with the central locking lever, has a rotary body operated manually from outside. The rotary body displaces the locking lever into a fastening or locking position which locks the vehicle lock, and consists of a cavity on the locking lever to take a tool. A lock plate (2) has an opening in for the tool. Between the lock-plate and the locking lever is a bistable tilting spring (12) which supports the swivel movement of two thrust pieces (13,14).
