Abstract (en)
[origin: EP1267032A2] Shutter (1) comprising a number of hinged segments (2) and rolled around a shaft (3) is prevented from being overwound by a safety device. The safety device has an axially displaceable spring bolt (7) running parallel to the segments which automatically engages in a lateral fixed recess (15) when the shutter is closed and is pulled out of the recess by the shaft when the shutter is raised. Preferred Features: The recess is arranged in a receiving part (6) connected to a guide profile (11) in which the shutter is guided.
