Abstract (en)

[origin: EP1267140A2] Device for non-detonative removal of detonatable objects comprises a charge (1) having a barrier plate (2) at a distance from its insert (7). The plate decelerates a projectile (10) hitting the plate, and decomposes to form a shattered cloud. Preferred Features: The distance from the charge to the object to be removed can be adjusted. The insert sits in an impedance ring in a casing (8). The barrier plate is made from metal.
