Abstract (en)

[origin: EP1267368A1] The electrical distribution transformer has a vat (12) containing a liquid or gas (14). There is a three phase electrical circuit (16) and windings (24) with an electrical primary (20). For each phase (34) of secondary circuit (18) there is a relay (42). There is a drive chain transmission between the electromagnetic relay and the switching mechanism.
