Abstract (en)
[origin: EP1267374A1] The high voltage circuit breaker has a chassis, a first connection contact (102) , and a second connection unit (104). There is a bridge contact (110) and a moving contact (116) and connecting fixed contact forming the engagement mechanism (112). The closing plane movement follows an inverse sequence with a first closure phase. The first closure phase has the contact bridge rotating in a first direction, and the second closure phase following a second rotation direction assuring contact between the mobile contact unit and the first contact connection.
