Abstract (en)  
[origin: WO0117688A1] A cyclone collector for vacuum cleaner including a cyclone body (1, 11, 31), a contaminated air suction inlet (2, 12, 32) for sucking contaminants and air into the cyclone body (1, 11, 31), and air vent (4, 13, 33) for exhausting air purified in the cyclone body (1, 11, 31), and a contaminant vent (5, 14, 34) for exhausting the contaminants separated from the cyclone body (1, 11, 31), is characterized in that the cyclone body (1, 11, 31) includes a flow guide means (7, 17, 37; 8, 18, 38) therein, which is disposed opposite to the air vent (4, 13, 33) so as to improve swirl force inside the cyclone body (1, 11, 31) and prevent swirl flow and exhaust air flow from interfering with each other.
