Abstract (en)
[origin: DE10011503A1] The spray head has a housing(1) closed off by a steel disc(3), and at least one jet outlet element(6) movably mounted in the head. A gearing is provided for the movement of the jet outlet element in such a way that the direction of the emerging water jet can be continuously altered in relation to the housing. The direction can be altered in a constantly repeating pattern. A guide section(9) in the jet outlet element is movable along a preferably closed path.
