Abstract (en)

[origin: WO0170411A1] invention concerns a fluid dispensing member (2) designed to be mounted on the neck (10) of a container (1), said member comprising: a body (2) defining a chamber (43) wherein slides a piston (4); a fixing member (3) designed to co-operate with the neck (10), said fixing member extending around the body; and a delivery channel (23) communicating the chamber (43) with a fixed dispensing orifice (81), said delivery channel (23) being formed between the body (2) and the fixing member (3). The invention is characterised in that the fixing member (3) is adapted to co-operate with an inner wall (11) of the neck (10) to enable the dispensing member to be fixed in the neck.
