Abstract (en)

[origin: WO0172436A1] The invention relates to a method for cleaning and sorting used paper containing cardboard and paperboard items, wherein it is possible to sort used paper occurring in a circular flow and to ensure that only a small amount of paperboard or cardboard remains once said used paper has been sorted. According to the invention, several axes (1) are used. Said axes are arranged parallel to each other and orthogonally with respect to the direction of conveyance of the used paper which is to be sorted. Oscillating levers (2) which are oriented in a parallel position with respect to the direction of conveyance are secured to said axes. At the end of the conveyance path, the paperboard or cardboard can be removed
