Abstract (en)

[origin: DE10009773A1] A store of materials (12) and a removal-point (16) form at least one segment (54,56) and are divided p into several segments for separately storing and preparing equipment. At least one partition (58) runs through the appliance (10) in its longitudinal direction. The shaft-shaped storage part is divided into at least two hollow compartments, and the removal part is divided into at least two segments each of which has a slide piece (60). A filler-hopper (20) on the end side (18) of the storage part facing away from the removal point is divided into several segments (64,66).
