Abstract (en)
[origin: WO0172518A1] The invention relates to a printing method, for the transfer of printing substances (8), from a colour support (2), onto a printing substrate, whereby the printing substance undergoes a volume- and/or position-change, by means of an induced process of an energy-releasing device and, thus, the transfer of a printed point, onto the printing substrate occurs. The aim of the invention is to provide a printing method and printing device, operable with low energy requirement, easily refillable with the printing substance and, furthermore, overcoming the difficulties above, whereby the printing substance (8) is coated on the colour support, forming an essentially complete film.
