Abstract (en)

[origin: WO0172928A1] The invention concerns a method for the synthesis of hydrocarbons by reacting a mixture comprising at least carbon monoxide and hydrogen in the presence of a catalyst carried out in a three-phase reactor, wherein the liquid Peclet number ranges between 0 (excluded) and about 10, at a gas surface speed U_g preferably less than 35 cm.s^{-1} , so as to promote the transfer of the gas into the liquid phase and avoid too much attrition of catalyst grains.
