Abstract (en)
[origin: WO0173117A1] The invention relates to the use of particles with signal-emitting characteristics and at least one group with an affinity for marked nucleic acids, for detecting marked nucleic acids which are hybridised with nucleic acids that are immobilised on a surface. The invention also relates to supports containing particles which have signal-emitting characteristics and at least one group with an affinity for marked nucleic acids, for detecting marked nucleic acids.
