Abstract (en)

[origin: WO0151691A1] There is disclosed apparatus for processing textile material in which the textile material is passed through a liquid in a chamber, comprising a body in which the chamber is formed with an inlet and an outlet for the textile material and seals at the inlet and outlet adapted for the passage of the textile material into the apparatus, through the chamber and out of the apparatus, wherein the body is formed in two relatively movable parts which on movement from a processing configuration to a threading configuration expose a path for the textile material through the seals and the chamber.
