Abstract (en)

[origin: WO0144576A1] The invention concerns composite materials and wiping articles exhibiting improved absorbent properties. More precisely, it concerns absorbent composite materials consisting of a superabsorbent product arranged between two or several cotton-wool-like cellulose facing webs. The invention also concerns a method and a device for preparing said products or wiping articles, and their uses in particular for wiping various liquids (water, oil, grease, biological fluids, mixtures etc.) in industry.
