Abstract (en)

[origin: WO0171143A1] The disclosure relates to a device for securing a window or wall element in a vertical frame portion (1), the window or wall element having a panel-shaped element (3), such as a glass pane. The window or wall element further has an edge profile (4) along that side which faces towards the frame portion (1). The edge profile (4) has a flange (9) which projects out towards the frame portion (1). The flange (9) is substantially parallel with a plane of extend of the window or wall element and is positionally fixingly clamped between clamping members (12, 13) on an inner (11) and an outer (10) mounting profile. The mounting profiles are interconnected with one another and positionally fixed in relation to the frame portion (1). A device for interconnecting two window or wall elements is further disclosed in accordance with the foregoing. The window or wall elements have an edge profile (4) along their sides facing towards one another. The edge profiles (4) have mutually projecting flanges (9) which are clamped between clamping members (12, 13) in a manner corresponding to that disclosed above.
