Abstract (en)

[origin: WO0173896A2] A plug connector for printed circuits comprises a plug (10), which supports the contact section (42) of the printed circuit (40) on one side and a retaining element (261, 262), by means of which the plug (10) may be pre-fixed, restrained in a pre-determined axial catch position in the port. On passing the axial catch position, the contact section (42) reaches the contact position with the contact spot of the port, by means of a vertical movement component, where the contact section is locked in a final position by means of a locking element.
