Abstract (en)
[origin: WO0171879A1] A low-voltage power installation in which elements (1-11) are to be interconnected via an energy distribution system with several sections (12-27) is configured by means of a (partial) specification of the elements (1-11) and the sections (12-27). The elements (1-11) and the sections (12-27) are specified by access to a catalogue (51) from which predefined (partial) specifications can be selected via an interface (43). The design of the sections (12-27) can be checked, supplemented or corrected according to a dimensioning criterion.
