Abstract (en)
[origin: WO0174974A2] The invention relates to a data transmission method for the topping-up of a pre-paid electronic credit of a service user, by means of a data or telecommunication network, essentially, in real time. Said service user possesses a first electronic transaction account and a service operator possesses a second transaction account and, depending upon a transmitted signal sent from a terminal belonging to the service user, the pre-paid credit is increased by a certain pre-determined electronic monetary value and, simultaneously, the same monetary amount is transferred from the first transaction account to the second transaction account.
