Abstract (en)
[origin: EP1270850A2] The door (1) attached to a frame (2) has a lock (5) on its door side. A locking-bolt (4) on the frame side of the door when closed grips behind the lock. When operating, the lock bolt protrudes into the frame opening (6). The lock bolt is movably positioned on the frame between an operating position and a non-operating position when it frees the frame opening.
