Abstract (en)
[origin: EP1270860A2] The two face plate sections (2) for the angular drive (1) extend at a given first angle relative to each other during the mounting stage. When one face plate section has been coupled to the associated first catch linkage at the same time as the other face plate section has been coupled to the associated second catch linkage, the angle between face plate sections is reduced. Catch linkages are located in the profiled grooves of the wing frame and are actively connected via an angular drive in the corner region (10) of the frame.
