Abstract (en)

[origin: EP1271430A1] A machine consisting of a metal cabinet (1) forming internally a refrigerated chamber (2) having two superimposed doors (17, 24), two vertical longitudinal carousels (3) for storing sandwiches (b) being mounted in said chamber. The sandwiches are displaced through an opening (16) towards an electric grill (11) that is mounted between both doors (17, 24) and that heats or toasts the sandwiches, which are then ejected to a collector (22) from which they are picked up by the user through an opening (22') in the outer door (24). The machine is characterized in that the two carousels (3) are mounted crosswise from the front to the back of the refrigerated chamber (2). A central push device (12) is mounted between the two carousels, which displaces the sandwiches (b) towards the grill (11) from a platform (10) to which they have been displaced previously from the carousels by corresponding push devices (7). <IMAGE>
