Abstract (en)

[origin: WO0179026A1] The invention concerns a self-propelled transport and handling device (1) for picking up and towing a load (2), such as a skip (3), comprising a rigid structure (4) provided with running (9) or sliding means at least in its rear part (8), opposite catching means (6) provided on its front part (5) and capable of co-operating with towing means (7) associated with said device (1), which comprises at least a wheel (10) both steering and driving. Said device is characterised in that it comprises a hook (12) capable of co-operating with said catching means (6) with matching shape and lateral grip means (13) designed to be urged to be fastened, from the lateral sides of the load (2) to prevent the self-propelled device (1) from rotating relative to said load (2) about a vertical pivoting axis passing substantially through the hook (12).
