Abstract (en)
[origin: WO0172625A1] The invention relates to a hydraulic winch control, comprising a variable displacement motor (12) supplied with a pressure agent via a directional control valve (35) for driving the winch (10). Said directional control valve (70) is controlled via a control valve that is functionally linked with an adjusting lever (81). In a mooring operation, the directional control valve is subjected to a predetermined actuating pressure difference so that the flow of pressure agent to the variable displacement motor is reduced.
