Abstract (en)
[origin: WO02068827A1] The invention relates to a rodless linear drive (1), whose housing (2) has a tubular body (3) provided with housing covers (4) on the front faces. The tubular body (3) has a longitudinal slot (16), which is covered by an internal and/or external sealing strip (28, 29). Fixing means (32), which contain a support body (35) located on the end section (33, 34) of the corresponding strip, are provided for fixing the end sections (33, 34) of the strips on their front faces. Said support body projects laterally beyond the external contour of the sealing strips (28, 29) and is supported on the corresponding front face (7) of the tubular body (3), independently of the housing cover (4) that is provided on the same front face.
