Abstract (en)

[origin: EP1273245A1] The packaging device comprises a product housing (240) and a piston (250) movable in the housing. A piston drive mechanism comprises a first element (220) able to rotate relative to a second element (210) to cause piston displacement. There is a collar (280) enabling relative rotation of the two elements over a first angular path to be transformed into a relative axial displacement of the two elements.
