Abstract (en)
[origin: EP1273282A2] The continuous adjustment (1) has a drive mechanism for lifting (3) and for tilting (4), and has at least four interlinked struts (5',5,6',6) which form a four-bar rod assembly with four links and two pairs of struts (5,6).. The first strut of the first pair is joined to the plane (2) being adjusted.; the second strut of the first pair is mounted in a fixed bearing. The drive mechanism for lifting grip a strut from the second pair; the drive mechanism for tilt grips a strut from the first pair .
