Abstract (en)

[origin: EP1273745A2] The anti-lifting device for a sliding door (2) comprises a strike plate, added on the edge of the door upright, having an opening extending in a direction perpendicular to its plane. A locking finger (14), sliding in a casing associated with the doorframe (3) or an adjacent sliding leaf (2A), is engaged under the action of a return spring. An Independent claim is included for a sliding door incorporating the anti-lifting device.
