Abstract (en)

[origin: EP1273747A1] The junction ending a first operating rod (5)-faceplate (3) unit (A) consists of a coupling tongue at the end of the operating rod defining an indentation extending it under the adjacent end of an operating rod (8) of a second rod-faceplate unit (9) extending the first. The coupling tongue engages with a complementary coupling in the end of this second rod. At the end of the faceplate is a covering tongue) under which the faceplate of the second unit (B) is inserted. There is a positioning stop under the covering tongue and on the coupling tongue for engaging respectively with the faceplate and the rod of the second unit.
