Abstract (en)
[origin: EP1274152A1] The connector has a contact (11) with a printed circuit board connection (5). There is a first support (16) on the printed circuit connected to a second flexible section (23). The flexible section contacts a complementary mechanism. A second support section (29) has play with respect to the first support maintaining contact when there is movement of the connection alcove (10).
